

STEP 1

Orig. 06/26/06

Layout the roof mounting bracket as shown in Fig. 1-1. Locate a structural member such as a rafter or a truss and lag the roof mounting bracket to it (see Fig. 1-1). Fold the bracket together overlapping the end sections. Be sure the flat faces of the bracket sections are touching and the outer section is 90 deg. to the ground. Secure the short bracket sections together using 2 - 3/8" Bolts w/ nuts (see Fig. 1-2).

STEP 2

Locate and secure the awning mounting bracket to the roof mounting bracket using 2 - 3/8" bolts w/ nuts (see Fig. 2-1). Hoist the awning assembly into position and anchor the mounting bar to the awning mounting bracket using 1 - 6mm Allen Bolt and lock nut per bracket (see Fig. 2-2).
